

P411

P411 -Haemodialysis and vascular access

Dr Sandip Mitra¹

¹Manchester, ,

Our aims:

The CSG brings together a national group of experienced UK researchers to address knowledge gaps and unmet need in haemodialysis technique and practice by coordinating and executing feasibility and multi-centre randomised trials.

Who we are:

We have representation from and is open to all UK renal centres. We have strong links with the UK Renal Registry and the Peritoneal Dialysis CSG and often meet jointly to help cross fertilisation of ideas and contribute to the design, development and facilitation of haemodialysis (HD)-related studies in conjunction with other CSGs.
