

P419

P419 -UK Renal Regenerative Medicine Network (UKRRMN)

Professor Patricia Murray², Professor Jamie Davies¹, Dr Bettina Wilm²

¹University of Edinburgh, , ²University of Liverpool, ,

Our aims:

- providing a forum for renal regenerative medicine researchers, generating research ideas as well as identifying and communicating priority areas for research
- facilitating collaboration between researchers and providing a resource to assist investigators in developing or refining research studies
- providing a point of contact for companies wishing to engage in renal regenerative medicine research in the UK
- advocating for funding of UK renal regenerative medicine research

Who we are:

This field holds great promise, and we believe that the UK has the potential to become a leader in renal regenerative medicine and stem cell research. This requires a multidisciplinary collaboration through groups such as the UKRRMN, between patients, renal, stem cell and cell biologists with an interest in renal 3D models, material scientists, bioengineers, clinical and pre-clinical imaging experts and clinicians (including nephrologists, transplant surgeons and genetics experts). We also collaborate and work closely with the Clinical Study Groups and the UK Renal Imaging Network.
